

# Cole Air Services:

## Protex RVD improving the way we work

“The Protex RVD has changed the way we work on-site. It has improved safety, productivity and will save us thousands.”

That is the opinion of Clinton Andrews, Senior Field Service Technician with Hunter-based refrigeration and air conditioning company, Cole Air Services, who now uses the device across a number of work sites.

Clinton first saw Wayne Callen’s invention some years ago on television and knew then that it had the potential to save time and money on any worksite.

He now uses the device on mobile generators across projects on BHP Billiton and Coal & Allied mines.

“Setting up an earth stake for mobile equipment including generators is obviously vitally important to ensure the safety of workers, but it is a very inefficient exercise in terms of productivity.

“We can have our blokes standing around for over an hour while an earth stake is installed and checked. In plenty of cases this process takes longer than the job itself.

“With the Protex RVD equipped to our generators, we can set up a job site virtually anywhere and have the generator powered up immediately.

“This simple device can save us thousands of dollars in improved productivity, without compromising on safety.”
